

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application.

1.- 13. (Canceled)

14. (Currently Amended) A system for storing an audio message sent from a communication device through a mobile radiotelephone network, the system comprising:

a subscriber database having a plurality of entries, each entry containing information for one user;

an audio server engine for communicating with the communication device, the audio server engine receiving user information from the communication device and authenticating the user by retrieving an entry having the user's information from the subscriber database, the audio server engine being responsive to a non telephone number feature code and a user identification code;

an audio message management unit for recording the audio message received from the communication device based on instructions from the audio server engine; and

an audio message storage area for storing the audio message.

15. (Original) The system of claim 14 further comprising a user authentication unit.

16. (Original) The system of claim 14 further comprising a feature code validation unit for validating feature codes received from the communication device.

17. (Original) The system of claim 14 wherein the system is connected to a public switched telephone network.

18. (Original) The system of claim 14 wherein the system is connected to a mobile switching center.

19.-23. (Canceled)

24. (New) The system of claim 14 wherein the user identification code comprises a mobile identification number of a mobile telephone.

25. (New) The system of claim 14 wherein the audio server engine records a message in response to a first non telephone feature code and the audio server engine retrieves a message in response to a second non telephone feature code, the second non telephone feature code being different than the first non telephone feature code.
